— ENTERPRISE FIELD GUIDE · AI ANALYTICS & INSIGHTS · 2026

Turn Your Data Into Decisions That Drive Revenue

We build predictive analytics platforms, real-time dashboards, and AI-powered reporting systems that give your leadership team the insights they need — when they need them, in plain language.

Predictive Analytics

Forecast demand & churn

Real-Time Dashboards

ERP, CRM, IoT connected

NLP & Text Analytics

Sentiment, tickets, contracts

AI-Powered Reporting

Auto MIS & board decks

— INSIDE THIS GUIDE

What you'll walk away with

A practical field guide to building predictive, real-time, AI-powered analytics — grounded in what Swaran Soft actually delivers for enterprise clients.

1	The State of Enterprise Analytics Today What's changed in the last 18 months — and 3 persistent myths.	p.03
2	Four Analytics Capabilities We Deliver Predictive analytics, real-time dashboards, NLP, and AI reporting.	p.04
3	How AI Analytics Actually Works A plain-English walkthrough from raw data to boardroom decision.	p.05
4	Why Enterprises Choose Swaran Soft Track record, deployment model, and certifications.	p.06
5	Next Steps & How to Start Book a demo, submit your use case, or explore the full AI suite.	p.07

WHO THIS IS FOR

CTOs, CFOs, Heads of IT, and operations leaders at enterprises drowning in disconnected dashboards and manual month-end reporting — who want real-time, plain-language insight from their own data, without depending on a large data science team or the cloud.

— SECTION 01 · THE LANDSCAPE

Most enterprise data still isn't working for you

The gap between companies with real-time visibility and those still working from static spreadsheets and month-end reports has widened sharply. Here's what's actually changed — and what's still myth.

85%

Forecast accuracy improvement

40%

Revenue uplift from AI recommendations

100%

Data sovereignty — no cloud required

48 hrs → Real-time

Typical reporting-cycle reduction after deployment

MYTH VS REALITY

MYTH

More dashboards means better decisions.

REALITY

One live, relevant KPI view outperforms a dozen static reports nobody opens.

MYTH

You need an in-house data science team to do this.

REALITY

Pre-built models and natural-language reporting let business teams self-serve without writing a query.

MYTH

Real-time analytics means sending your data to the cloud.

REALITY

The analytics stack can run 100% on your own infrastructure — zero cloud dependency.

Wondering where your data stack stands? Talk to our team →

— SECTION 02 · CAPABILITIES

Four analytics capabilities we deliver

Each capability ships as a standalone engagement or as part of a full analytics platform build.

Predictive Analytics

ML models that forecast demand, predict churn, identify risks, and surface opportunities before they become obvious.

Best for: Sales, Risk & Ops

- ✓ Sales demand forecasting
- ✓ Customer churn prediction
- ✓ Equipment failure prediction
- ✓ Credit risk scoring

Real-Time Dashboards

Live operational dashboards connected to all your data sources — ERP, CRM, IoT, and external APIs.

Best for: Leadership & Ops

- ✓ Executive KPI dashboards
- ✓ Operations control towers
- ✓ Supply chain visibility
- ✓ Financial performance tracking

NLP & Text Analytics

Extract insights from unstructured text — customer feedback, support tickets, contracts, and social media.

Best for: CX, Legal & Intel

- ✓ Customer sentiment analysis
- ✓ Contract risk extraction
- ✓ Support ticket classification
- ✓ Competitive intelligence

AI-Powered Reporting

Automated report generation with natural language summaries — eliminating manual MIS and board report preparation.

Best for: Finance & Board

- ✓ Automated MIS reports
- ✓ Board presentation generation
- ✓ Regulatory compliance reports
- ✓ Variance analysis narratives

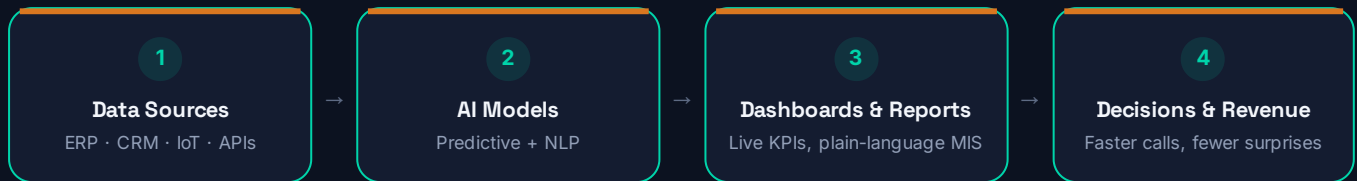

— SECTION 03 · UNDER THE HOOD

How AI analytics actually works

Plain English, no jargon required.

Think of it like a newsroom. Raw wire reports — your data — come in constantly from many sources. An editor (the AI layer) checks the facts, spots the real story, and writes it in plain language before it ever reaches your desk. That's natural language processing and predictive modelling working together, quietly, in the background.

THE FLOW

WHAT THIS MEANS FOR YOU

No manual exports between disconnected systems

Forecasts and reports written in plain English, not just charts

Everything can run inside your own infrastructure if data residency matters

SECTION 04 · WHY SWARAN SOFT

Why enterprises choose Swaran Soft for analytics

01**25+ Years of Enterprise IT**

350+ global clients across BFSI, manufacturing, government, and healthcare — analytics grounded in real implementation experience, not theoretical frameworks.

02**Open-Source First, 100% Data Sovereignty**

Deployed on your own infrastructure with zero cloud dependency where it matters — no vendor lock-in, lower long-term operating cost.

03**India-First, Globally Deployed**

ISO 9001 Certified, NASSCOM Member, DSCI Member, DPIIT Recognised, Clutch Top B2B — with offices in Gurugram (HQ), Dubai, Tallinn, and the USA.

04**Plain-Language Reporting**

Dashboards and MIS reports written the way your leadership actually reads them — not just charts and raw numbers.

— SECTION 05 · NEXT STEPS

See your data come alive

Book a live demo. We'll connect to a sample of your data and show you what your analytics platform could look like in 30 minutes.

Book Analytics Demo

A free 30-minute walkthrough using a sample of your own data.
